

Denis Tokarev

Software Engineer / JavaScript Developer

@ hire@devlato.com

 <https://github.com/devlato>

Summary

I'm a developer you probably need. I used to do both frontend and backend with any technologies suitable for a goal because because I love to try and learn the new stuff. I always do a detailed analysis of tasks and problems. That's why I accurately follow the estimations and (mostly) deliver required features in time.

Here is a shortlist of my qualities:

- 6 years of experience in Web Development industry.
- Strong knowledge of JavaScript and another Web technologies.
- Experience in both development and team leadership.
- I have a passion to analyze and solve problems.
- From time to time I contribute to some open source projects. But I would like to do it more.
- I have a Software Engineering-related Bachelor's degree.

If you feel interested, please don't hesitate to contact me any time. I like to discuss technologies, products, problems, and solutions. If you want to hire me, please [send me an email](#).

Bachelor's degree in Automated Information Processing and Control Systems.

Work experience

Zalando SE

December 2017 – Now

<https://zalando.de/>

Software Engineer

I have started working at Zalando as a freelancer but decided to become a full-time employee. I am working there on a TNA/DNA Tooling project. It's a server-driven UI implementation. This means some kind of an IDE for mobile apps and a platform for distributed development teams. We implemented the project in JavaScript, TypeScript, React, Redux, Node.js, Express.js, PostgreSQL, MongoDB, etc.

Deutsche Bank / HCL Technologies

September 2017 – November 2017

<https://db.com/>

Senior React Developer (Contractor)

I worked there for a couple of months as a freelancer. This position required relocation to Frankfurt. I had found Frankfurt a quite boring place and decided not moving there, that's why I quit. I was working on a component library for internal wealth management projects. The main technologies I've been using there were React, Typescript and Jest.

Redux

glispa GmbH.

April 2016 – August 2017

<https://ui.ampiri.com/>

Frontend Developer, Team Lead

glispa GmbH. had bought the product I had been working on at Moneytap Ltd. and moved the team from Saint Petersburg, Russia to Berlin. Here in Berlin, I continued developing the same project: a control panel for a mobile advertisement mediation SDK. I got a small team of three people to manage as well. While working there, I used React and Node.js, but I was also maintaining the REST API written in Java and Spring, MongoDB, Redis.

Unfortunately, after 1.5 years of project development, the top management of the company had been replaced. The new CEO decided to continue development in Greece instead of Berlin. As far as my darling team members got fired, I decided to quit too. But it was a very nice experience and I liked working there.

Moneytap (got acquired and renamed to Ampiri/Avocarrot/glispa Connect by glispa GmbH.)

September 2015 – April 2016

<https://ui.moneytapp.com/>

Full-Stack Developer

Moneytap hired me as the only developer of Moneytap UI. It was a control panel for a mobile advertisement mediation SDK. My initial target was to improve the existing MVP version that the management presented to investors. I had completed this task and started implementing the new big iteration of this product. MVP was good enough for convincing Glispa GmbH. to acquire us.

Glispa GmbH. is a big player in the German market of mobile advertisement. I continued the development of the new version with the rest of ex-Moneytap team in Germany. We became a part of a large Glispa team. The technologies I used while working there are Java, Spring, MongoDB and React.

SEMrush

March 2014 – September 2015

<https://semrush.com/>

Full-Stack Developer

I joined SEMrush as a part of a billing team. I call it a "billing team", but actually the team was responsible for several internal products. We had lots of responsibilities – billing, parts of an administration panel, PDF reports, some dashboards.

After working on this team for a while, my colleague and I had got a management approval for a new project. It was a PDF reporting platform designed from scratch. There were many requirements. In general, we were supposed to build a real-time export platform with PDF support. We had to provide a way to customize brands and colors for the reports as well. A DSL suitable for the distributed teams was a requirement too.

After months of hard work, We created this platform and an editor app. This WYSIWYG editor allows dropping of configurable widgets onto a virtual list of paper. Every action triggers a visual feedback of the resulting report. The document gets autosaved as a template. After that, a user can generate a report by clicking a button.

Implementing it took a lot of efforts and gave me an unmeasurable experience. The technologies we used there are JavaScript, Node.js, MySQL, Backbone, and a wkhtmltopdf tool.

PHP

BeGet Ltd.

July 2013 – March 2014

<https://beget.com/>

Web Developer

Beget is a company running a hosting business. I joined Beget as a web developer. I was responsible for implementing new features and maintaining existing ones for a hosting control panel. It's a handcrafted product created for users. This panel lets a user set up hosting, configure servers, buy domains and extra services. I also had developed some features for a configuration panel that employees of Beget were using.

Lightsoft Research (remotely)

March 2013 – July 2013

<http://lightsoft.ru/>

Web Developer

I had been working for Lightsoft remotely from Saint Petersburg, Russia. I was responsible for parts of Hotelbook: a website for searching and booking the hotel rooms at different locations. I decided to quit because I found out that I wasn't ready enough for working remotely.

PHP

MySQL

JavaScript

Praktika

November 2011 – February 2012

<http://sd-praktika.ru/>

Web Developer / Intern

Praktika is a governmental project and a document exchange system. Its main goal is to automate and speed up a review and a document signing routines among the officials and clerks.

The product consists of many parts. I was working mostly on reporting part. It was an internship, I didn't like how the processes had been built there so I decided not to continue working there.

PHP

PostgreSQL

JavaScript

Kgtu-Kai

August 2011 – May 2012

<http://kgtu-kai.ru/>

Software Engineer, Tech Lead

It was a startup of my friend when we were students. I was the main developer and kinda tech lead/CTO of the product. I was responsible for developing and maintaining the web service for selling and buying study papers. I worked there for a year. In 2012, I moved to another city and that's why I quit. The product wasn't successful but it gave me a lot of real startup-alike experience.

PHP

MySQL

JavaScript

Hobbies

I like to travel very much! I travelled mostly across the European countries and Russia and visited the USA twice. My next goals are Australia and New Zealand.

On my spare time I watch movies or comedy series. Sometimes I do some sports: cycling, running, going to the gym.
